

**OUR SOLUTIONS DEDICATED TO
THE AGRI-FOOD INDUSTRY**

CATTINAIR

Together to preserve air quality!

FOR WHOM?

- Grain farmers
- Seed companies
- Millers
- Maltsters
- Brewers
- Starch producers
- Industrial bakers
- Animal feed
- Agricultural and viticultural cooperatives
- Other agri-food industries

FOR WHAT?

Extracting and filtering plant, mineral, chemical and organic **dusts**.

Reduce the **risk of occupational diseases** (respiratory problems, allergies, etc.) due to dust inhalation.

Anticipate ATEX risks. 
Control the risk of explosion.

Ensure a **safe and healthy** working environment for operators.

Reduce energy costs.

Save energy and lower production costs.

HOW?

- Turnkey solutions customised and adapted to your needs and processes.

- Vacuuming and filtration of vegetable, mineral and/or animal dust.

- Catchment at the source.

- Cleaning of workshops with central vacuuming.

- Pneumatic transfer and storage.

- ATEX de-zoning.

- Preventive inspection of your installations.

Production processes in the food industry (unloading, sorting, handling, cleaning, grinding, etc.) generate **dust emissions** that can cause health risks for operators (skin and respiratory diseases, etc.).

These dusts must be **captured**, **filtered** and **treated** to make the working environment and workshops more conducive to safe working.

Vacuuming, **source capture**, and **cleaning of production zones** are highly recommended to remedy these indoor air pollution problems.

Your needs are unique, which is why the proposed installation must be **adapted** and **personalised** to meet your expectations and your own requirements. Our teams accompany you from A to Z in your project, from study to its implementation and its follow-up/control.

The comfort and health of your employees are paramount, and in addition, their safety must be considered regarding the risk of explosion.

Our intervention teams are ISM-ATEX trained and will be able to assist and advise on **ATEX zoning** and offer the best solution in compliance with the ATEX Directive.

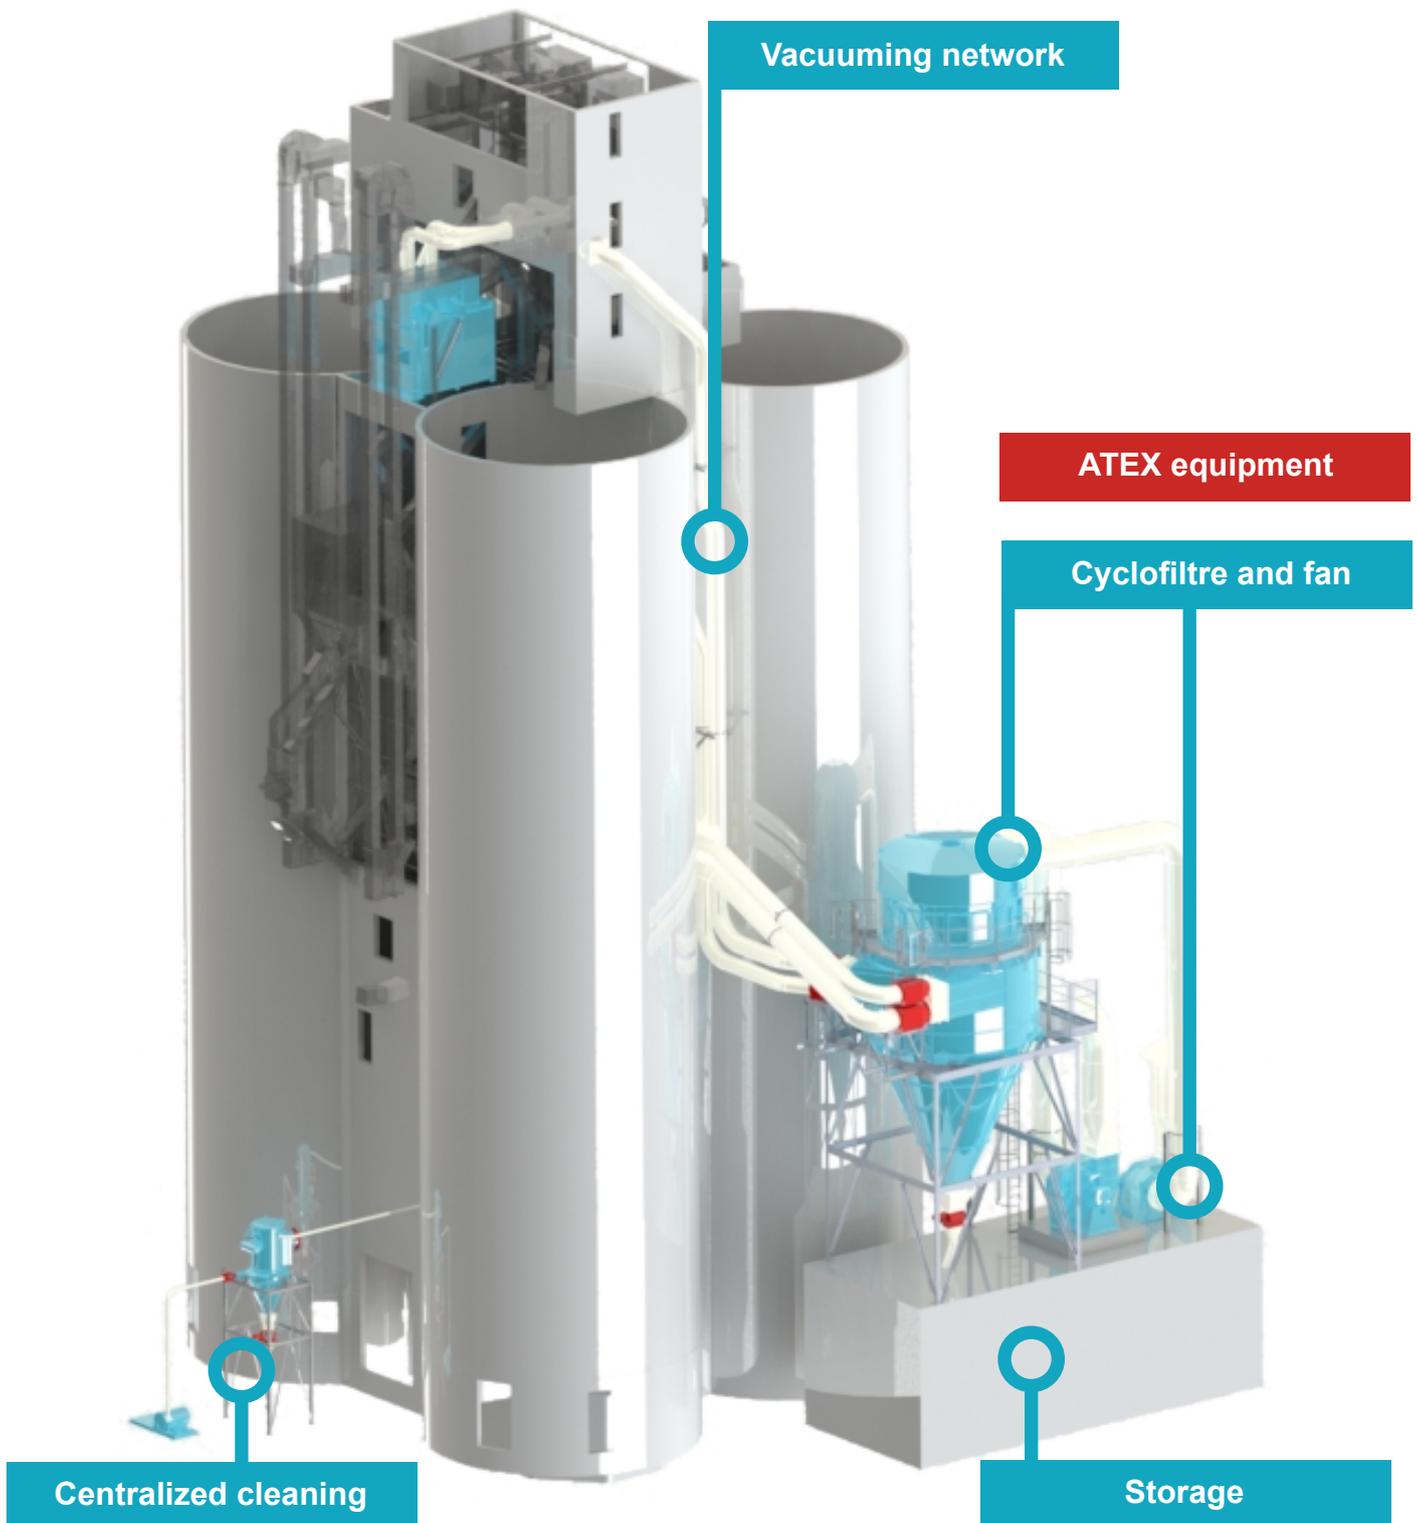

OUR KNOW-HOW

● Dust vacuuming and filtration:

on production lines and processes (crushing, sorting, sizing, ginning, etc.).
on loading or unloading bays (truck, ship, train).
ingredient preparation and weighing stations.
packaging, weighing, dosing stations...
on handling and storage lines.
●●●

● Extraction and filtration of oily and cooking vapours.

● Central vacuuming for floor and machine cleaning.

OUR BENEFITS

- Robustness of the installation
- French manufacturing
- Productivity improvement
- Advice on airflow and ATEX
- Preventive inspection of the installation
- Control of supply chain
- Spare parts
- Energy savings
- Single point of contact

100% FRENCH MANUFACTURING

Located in Luxeuil-les-Bains (70), our production site includes 7,640 m² of workshop space on a 27,280 m² site used for storage and shipping.

50 employees work daily to manufacture and supply quality products.

Do not hesitate to ask us to come and visit our factory, you will be able to see the quality of our resources and the know-how of our teams.

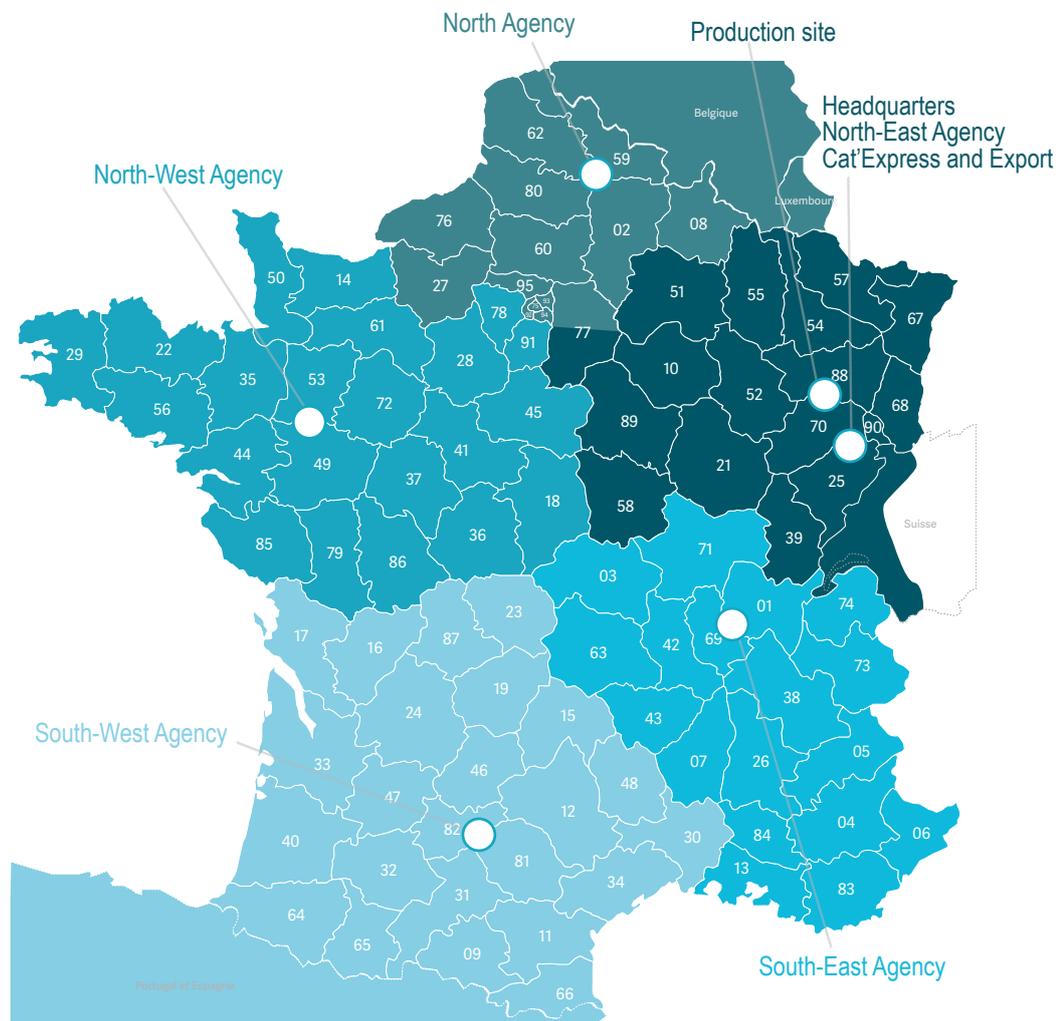

WHO ARE WE?

CATTINAIR has specialised in dust transfer and filtration since 1959.

Based in Franche-Comté, our company has a national reach thanks to our five technical sales agencies and our production site.

100% French manufacture under ISO 9001:2015 and ATEX production quality assurance.

Choosing CATTINAIR is the guarantee of long-lasting installations, with performance guarantees that comply with current regulations and promote energy-saving solutions.
